

## Scope of services and specializations

In my medical practice, it is very important for me to have enough **time** for my patients, to **listen** and attend to you in a relaxed atmosphere and provide services that are tailored to your individual needs. Based on the information provided by you and my medical findings, I will prepare a **tailor-made** diagnosis and therapy for you.

The type of therapy depends not only on the medical findings, but also takes into account your response to and success of previous treatments and your **personal wishes** and preferences.

As a rule, all available conservative treatments and medications are exhausted first of all. Surgery is recommended only, if absolutely necessary and if there is no reasonable alternative.

All surgical procedures are carried out in accordance with international standards with **state-of-the-art, minimally invasive** technologies with maximum tissue conservation and minimal trauma. These methods have substantial advantages and are not only applied for laparoscopy (**keyhole surgery**), but also for many other surgical procedures; they cause small or hardly visible scars, **minimal pain**, accelerate recovery and reduce the **length of hospital stays**. Some treatments can also be performed on an outpatient basis or under local anaesthesia.

Apart from painless gastroscopy and colonoscopy, I specialize in the diagnosis and strategic planning and therapy of **reflux, diseases of the thyroid gland, large intestine, rectum** and **tumours** (cancer) in the abdomen, **hernia** repair (e.g. inguinal hernia, abdominal wall hernia or hiatus hernia based on state-of-the-art methods, stage-appropriate **hemorrhoids** treatment according to the latest methods, such as HAL / HAL-RAR or Longo, which cause little or no pain, as well as **vascular surgery**, including therapy of varicose veins and intermittent claudication.

Overview of services:

### General, minimally invasive and tumour surgery (laparoscopy)

Interventions on thyroid gland, breast, stomach, liver, gall bladder, small and large intestine, rectum and hemorrhoids

### Hernia repair

Open and laparoscopic surgery (TAPP), intraperitoneal onlay mesh (IPOM)

### Vascular surgery

Therapy of intermittent claudication, aneurysms (bulging or swelling of blood vessels) and varicosis

## **Endoscopy**

Gentle, painless gastroscopy and colonoscopy in sedation, polypectomy and stenting, interventions

## **Specialist for reflux diagnosis and therapy (GERD)**

Please feel free to make an appointment and I will be pleased to discuss your problems and needs with you in detail. Together with you, I will develop an individually tailored medical treatment concept to improve your health, well-being and quality of life.
